

New Zealand accession dates for US patent specifications

This information has been taken from IPONZ's past collection of US patent specifications. The data include the range of patent numbers which have been received by paper, microfilm or CD and the date that the film was made publicly available in New Zealand.

The collection covers patent specifications for the periods: 1940-1947 and 1961-2007. The years 1948 - 1960 have not been recorded as they were not able to be located.

IPONZ stopped receiving US Patent Specifications after August 2007. Accession dates after this time are determined by:

1. the date the patent was published on the US website, or
2. one month after the above

See the tables below for information about:

Key to US microfilm accession date tables

Film reel	A reel of microfilm containing patent documents filmed page by page, viewable and printable through a microprinter.
Year:	This is the year the patent was published in the US.
Number:	Consecutive numbers are given for each reel of patents published in a particular period. The publication date may state a period of a week, or it may be a day.
Issue date (USPTO):	This is the US publication date. It may be given as a period of a week or it may state a particular day.
Contents:	These are consecutive patent publication numbers written as a range. The numbers are for the first and last patent documents on the reel.
Accession date IPONZ:	The date the film reel was made publicly available in New Zealand at IPONZ.
