(57) PROBLEM TO BE SOLVED: To provide a device for Ohmic heating a food article, in particular, a food article which is made from the inhomogeneous mixture of a liquid phase and solid particles. ; SOLUTION: This device is for Ohmic heating a food article, in particular, a food article which is made from the inhomogeneous mixture of a liquid phase and solid particles, and has at least one heating tube which has a tubular cross section, and circular electrodes on both the ends and is made of an electrical insulating material. The two circular electrodes are connected to an electric source, and a heating device is supplied with a feed pump which is driven with a first motor, while the feed pump directly opens into the heating tube. The heating tube is driven with a second motor which is controlled to offer velocity of flow in a heating chamber and includes a worm made from a non-conductive material.
